

**CLEAN VERSION OF THE ABSTRACT****ABSTRACT OF THE DISCLOSURE**

A system and a method for mounting a speaker unit (12). The system contains a surface mounting bracket (14) including at least one male attachment mount (20) and a speaker unit (12). The speaker unit 12 has at least one audio speaker and a semi-circular shaped surface which has angularly spaced apart female attachment grooves (44). The invention further includes a lightpipe (65). The angularly spaced apart female attachment grooves (44) are adapted for removably engaging the male attachment mount (20). In another embodiment, the speaker mounting system (10) contains a rotating base stand (80) having angular markings (92) for alignment of a shaft speaker unit (88).
